

THEPORT

CADDO - BOSSIER

Infrastructure

The Port of Caddo-Bossier offers excellent power, water, telecommunications and transportation and other infrastructure resources necessary for success in today's global marketplace.

The Port has worked in many ways to assist companies with building facilities and other support infrastructure. In addition, The Port has constructed many buildings, warehouses, hard-stand facilities, roads, rail spurs and other infrastructure support mechanisms in order to facilitate the movement and storage of customer cargo and commodities.

Port Roadways

The Port provides an excellent internal network of roadways to facilitate the shipping of cargo and other goods between the six dock facilities and the businesses located at The Port. This internal network of roadways integrates seamlessly with the local, state, US and Interstate highway systems to place companies located at The Port in the best position to reach their customers by motor freight.

Port Warehouses

The Port's general cargo dock has two warehouses: one 60,000 sq. ft. warehouse with a 30 ton Gantry crane, and one 30,000 sq. ft. warehouse with a 50 ton Gantry crane. The dock area has roll-on, roll-off capability, as well as a rail-on dock. A new 400 foot dock with a 200 ton Crawler crane was completed in late 2012.
